Overview and Highlights

Pages 1-4 Labor market and population highlights of the workforce area.

Workforce Area Maps

Pages 5-7 Map of the 16 workforce areas in Massachusetts, map of individual workforce area, and an alphabetical listing of the cities and towns within each workforce area.

Profile of Unemployment Insurance Claimants

Page 8 Grid of unemployment claims statewide and by workforce area for March 2010. Demographic data is displayed for race, gender, and Hispanic or Latino status. Also provided is the duration of unemployment, the average weekly wage during the 12 months prior to the filing, age group, and level of educational attainment.

Page 9 March 2010 data on continued claimants for unemployment insurance residing in the local workforce area. Demographic data are displayed for race, gender and Hispanic or Latino status of the claimants. Data are also provided for length of the current spell of unemployment, the average weekly wage during the 12 months prior to filing, age group, and level of educational attainment. For comparison purposes statewide statistics are also provided.

Page 10 The occupational categories of the continued claimants arranged in accordance with 22 major groups of the Standard Occupational Classification (SOC) system. The accompanying chart compares the occupational distribution of claimants in the local area with the statewide claimants for the ten largest groups.

Page 11 The industry distribution of the continued claimants' former employer grouped into the 2-digit sectors of the North American Industry Classification System (NAICS). The accompanying chart compares the industry distribution of local claimants' former employers with that of statewide claimants for the ten largest industries. (It should be noted that the employers of local claimants are not necessarily located in the same workforce area in which the claimants reside).

Labor Force and Unemployment Statistics

Page 12 Average labor force, employment, unemployment, and unemployment rate data for the state and each of the workforce areas for the 1st quarter of 2010. The unemployment rate is also shown for the same quarter of the preceding year. The data are not seasonally adjusted.

Page 13 An expansion of page 12 that includes average labor force, employment, unemployment, and unemployment rate data for the state, the workforce area, and each city or town in the area for the 1st quarter of 2010. The unemployment rate is also shown for the same quarter of the preceding year. The data are not seasonally adjusted.

Summary of Trends in the Brockton Workforce Area

Profile of Unemployment Insurance Claimants

- A total of 5,466 individuals were continuing to collect Unemployment Insurance in the Brockton Workforce Area during March 2010, with 33.1% collecting for at least 15 weeks. The percentage collecting 15+ weeks was slightly higher than the statewide percentage of 32.9%.
- Among the UI claimants in Brockton, 31.2% earned less than \$500/week on their previous job, compared to 30.2% for Massachusetts as a whole. Likewise, 28.8% of the Brockton Area claimants had weekly wages in excess of \$1000/week, slightly less than the 30.7% across the entire Commonwealth.
- With regard to age, 42.1% of Brockton area claimants in March 2010 were 45 years or older which was below the statewide share of 44.6%.
- The proportion of Brockton area claimants that were high school dropouts (10.8%) was almost identical to the statewide share of 10.6%. Conversely, the percentage of Brockton UI claimants that possessed at least a Bachelor's Degree (13.3%) was considerably lower than their statewide counterparts (19.6%).
- The four largest occupational categories; Construction (19.7%), Office and Administrative Support (15.1%), Transportation and Material Moving (9.5%), and Production (9.3%) accounted for over half (53.6%) of Brockton area claimants. In addition, Management (7.9%) and Sales and Related (6.7%) were also large contributors to the Brockton UI claimant population.
- From an industry perspective, Construction was by far the largest source of UI claimants in Brockton (23.0%). In addition, Administrative Support (14.0%), Retail Trade (9.3%), and Manufacturing (8.6%), and, were large contributors to the UI claimant population. Collectively, these four industry categories comprised 54.9% of the total Brockton claimant population.

Labor Force and Unemployment

- Every Workforce Area in the state experienced substantial increases in unemployment during the past year. Between the first quarters of 2009 and 2010, the seasonally unadjusted unemployment rate in the Brockton Workforce Area increased from 8.9% to 10.8%. A total of 13,645 Brockton residents were unemployed in first quarter 2010, an increase of 2,735 (25.1%) over the year. During this same period, the seasonally unadjusted unemployment rate in Massachusetts increased from 8.2% to 9.9%, representing 342,133 unemployed residents statewide, an increase of 62,477 (22.3%) over the year.
- The number of employed residents in Brockton increased by 1,286 (1.2%) to a 2010 first quarter level of 112,523. Between the first quarters of 2009 and 2010, the number of employed persons in Massachusetts decreased by -4,457 (-0.1%).
- During the period under review, Brockton's labor force increased to 126,168 (3.3%), while the Massachusetts labor force increased by 58,020 (1.7%) to 3,463,462.

Summary of Trends in the Brockton Workforce Area

Employment by Firm Size

- Small employers dominate the Brockton Workforce Area. Among the 6,139 establishments reporting employment in March 2009, 86.5% had fewer than 20 employees. These firms, however, accounted for just 25.4% of the jobs located in the Brockton region.
- In contrast to the small business employers, 155 establishments (2.5%) reported having at least 100 employees. These firms, however, were responsible for 45.0% (39,845) of all jobs in the Brockton Workforce Area. The share of employment among large employers in Brockton was below the statewide share of 49.4%.

Industry Employment and Wage Trends

- Between the third quarters of 2008 and 2009, the number of jobs in the Brockton Workforce Area decreased by -2,484 or -2.8%, the smallest percent decline of any of the state's 16 Workforce Areas. During the same period, the Massachusetts economy decreased -6,044 jobs, a decrease of -0.2%.
- Three sectors, Health Care and Social Assistance (16.0%), Government (15.6%), and Retail Trade (14.3%) comprised almost 46% of all jobs in the Brockton Workforce Area. Two of these sectors ran counter to the overall trend and gained jobs between the third quarters of 2008 and 2009. Health Care and Social Assistance grew by 449 jobs (3.1%) while State Government registered an increase of 511 (14.3%) jobs. Retail Trade decreased by -274 (-2.1%).
- Significant job losses occurred in a diverse array of industries. Manufacturing (-1,177, -15.0%), Construction (-774, -13.2%), Wholesale Trade (-472, -9.0%), Professional and Business Services (-310, -3.4%), and Financial Activities (-294, -9.3) all experienced job losses between the third quarters of 2008 and 2009.
- The 2008 annual average wage in the Brockton Workforce Area of \$44,124 was below the statewide figure of \$56,759 by \$12,635. Among the key sectors whose annual average wages exceeded the overall average in the Brockton Workforce Area were Wholesale Trade (\$63,564), Construction (\$63,435), Financial Activities (\$56,543), Manufacturing (\$52,734), Professional and Business Services (\$52,375), and Health Care and Social Assistance (\$45,891).
- Two of the region's largest sectors, Retail Trade (\$27,056) and Leisure and Hospitality (\$15,264), had wages that were considerably lower than the Brockton annual average wage of \$44,124. In addition, Transportation and Warehousing (\$40,016) was lower than the overall average for the Brockton Workforce Area.

Massachusetts Industry and Occupational Projections 2006-2016

- The Massachusetts economy is expected to generate 216,650 net new jobs between 2006 and 2016, an increase of 6.3%. An additional 768,330 job openings will result from the need to replace workers who retire, change industries or change occupations. In total, nearly one million jobs will need to be filled by 2016.

Summary of Trends in the Brockton Workforce Area

- The two fastest growing industry sectors, Professional, Technical, and Business Services (+18.1%) and Health and Educational Services (+16.8%) will also add the most jobs, expanding by 85,400 and 102,020 jobs respectively, and together will represent more than 86 percent of all net new jobs. Health Care alone will account for 64,630 jobs during the projection period. The third fastest growth is expected in Leisure and Hospitality (+9.2%), which is projected to add 27,160 jobs.
- On a more detailed basis, eight industries are expected to increase by more than 10,000 jobs. These include Private Hospitals (+23,530), Management and Technical Consulting (+19,100), Computer Systems Design (+17,600), Food Services and Drinking Places (+16,450), Individual and Family Services (+12,870), Residential Care Facilities (+11,320), Offices of Health Practitioners (+10,510), and Colleges and Universities (+10,300). Collectively, these eight industries account for nearly 121,680 or 56.2% of the 216,650 projected net new jobs.
- Among the 30 fastest growing occupations, 13 are in either Health Care or Information Technology. In terms of education and training, 23 of these fast growing occupations require at least an Associate's Degree. The top five fastest growing occupations include Network Systems Analysts (+50%), Personal and Home Care Aides (+36%), Computer Applications Engineers (+35%), Home Health Aides (+34%), and Veterinary Technologists and Technicians (+33%).
- Twenty occupations will account for more than half the net new jobs created through 2016. Many are large occupations concentrated in industries such as Retail Trade and Hospitality. The five occupations generating the most new jobs are expected to include Registered Nurses (+16,110), Customer Service Representatives (+8,390), Computer Software Applications Engineers (+8,260), Combined Food Preparation and Serving Workers (+7,760), and Home Health Aides (+5,820).
- While the focus is often on new job growth, it is important to remember that most job openings will be the result of replacement demand and not growth. In fact, 78% of the nearly one million projected net new job openings statewide will occur because of replacement associated with retirement, labor force withdrawal, and occupational changes. For example, total projected net new openings for Registered Nurses are expected to be 29,050, with 12,940 replacement jobs and 16,110 new jobs. Replacement needs tend to be greatest in occupations with high proportions of workers nearing retirement (teachers, machinists) or occupations with large concentrations of young and part-time workers (waiters and waitresses, retail salespersons).
- Education and training will play an increasingly prominent role for both current and future job seekers. More than half (60%) of all new jobs related to growth will require an Associate's Degree or higher. While a Bachelor's Degree may be preferable, it is important to recognize that some form of post-secondary education will be essential for those seeking a rewarding career path with good pay and upward mobility.

Summary of Trends in the Brockton Workforce Area

Population Estimates 2000-2009

- Between the April 2000 Census and July 2009, the total population in the Brockton Workforce Area grew by 6,264, an increase of 2.7%. During this same April 2000 to July 2009 period, Massachusetts' population increased by 244,468 (+3.9%).
- Among the 30 largest cities and towns in Massachusetts, there were 13 that lost population. Brockton, the state's 6th largest city, experienced a slight population decrease of 799 or -0.8%. As of July 2009, the Brockton population stood at 93,529.
- As a result of daytime population changes due to commuting, the Brockton Workforce Area had a significant daily net outflow of 23,062 workers due to commuting. This resulted from the difference between 112,558 employed residents who lived in the area as compared to 89,496 workers employed by Brockton Workforce Area business firms.

Massachusetts and U.S. Wages by Occupational Group

- According to the most recent wage survey conducted in May 2009 the mean Massachusetts wage for all occupations was \$52,710. The average Massachusetts wage exceeded the average U.S. wage of \$43,460 by \$9,250 or 21.3%.
- Massachusetts wages were larger than their U.S. counterparts in all 22 occupational groups for which wage information was collected. The top three occupational categories in Massachusetts were Management (\$117,640), Legal (\$99,920), and Computer and Mathematics (\$88,610).
- In addition to the three occupational groups noted above, there were four other occupational groups in Massachusetts that exceeded an average wage of \$70,000. These categories included Architecture and Engineering (\$80,470), Healthcare Practitioners (\$78,390), Business and Financial (\$76,990), and Life, Physical, and Social Science (\$74,710).
- On the opposite end of the wage scale, the three occupational categories with the lowest average wages in Massachusetts were all below \$30,000. These groups included, Personal Care and Service (\$29,070), Farming, Fishing, and Forestry (\$28,600), and, the category with the lowest average wage, Food Preparation and Serving (\$25,110).

Massachusetts 16 Workforce Areas

The Brockton Workforce Area comprises 10 cities and towns in the following 2 NECTAs

-  Boston-Cambridge-Quincy, MA NECTA Div.
-  Brockton-Bridgewater-Easton, MA NECTA Div.

Brockton Workforce Area

Guide to Interpretation of Location Quotients

General Concept

The location quotient (LQ) is a commonly used measure intended to help analysts compare a region's level of industry concentration relative to a larger geographic unit such as the state or the nation as a whole. The larger geographic area is referred to as the "base" area or the "reference" area. Location quotients are typically developed for a state, with the U.S. as the base area, or a sub-state area (such as a labor market area or a Workforce Area), with the state as the base area. Location quotients are relatively simple to calculate and yet offer a quick and often valuable insight into a region's employment dynamics.

Calculation of Location Quotients

The location quotient is the calculated ratio of an industry's share of total local area employment divided by the same industry's share of total base area employment. For example, to calculate a location quotient for Educational Services (NAICS Sector 61) employment in Boston, one would need the following data:

- Educational Services employment for Boston
- Total employment for Boston
- Educational Services employment for the base area (usually the state)
- Total employment for the state

The formula is as follows:

$$L:Q.= \frac{\frac{\text{Educational Services employment in Boston}}{\text{Total employment in Boston}}}{\frac{\text{Educational Services employment in MA}}{\text{Total Employment in MA}}}$$

Interpretation of Location Quotients

A location quotient of greater than one means that the local area has a relatively higher concentration of employment in a given industry than the base area. A location quotient equal to one means that the local area has the same proportion of employment in a given industry as the base area. Location quotients of less than one mean that the area has a smaller proportion of employment in the industry than the base area. This measure can be computed at any industry level the analyst deems important. Location quotients at the aggregated two digit NAICS Sector level may mask significant activity in more detailed industries in the local area. Location quotients should also be viewed in conjunction with other factors, such as the absolute level of employment in the industry. A very high location quotient in an industry that only employs a small number of workers is probably not that significant to local planners. It is generally accepted practice to interpret location quotients of ≥ 1.25 as "high" and $\leq .75$ as "low."

One should keep in mind that the location quotient is only an indicator of relative employment concentration in a given area, as compared to the larger (base) area. A high L.Q. does not necessarily mean that there will be growth in that industry. It only means that, on a relative basis, the industry is significant to the local economy. Employment growth is dependent on such factors as the current phase of the business cycle, current nature of technology, business practices, consumer tastes and preferences, demographic trends, etc.

While location quotients can provide useful insights into industries where a local comparative advantage exists, they cannot, in and of themselves, provide specific policy guidance. They can help policy makers formulate further questions as to the nature of an areas comparative advantage and how to take advantage of the situation. Some possible questions are:

- 1) Is the industry dominated by a few large firms or are there many smaller firms?
- 2) What are the reasons why employers are attracted to the area and what can be done to encourage growth (or discourage an exodus) of employers?
- 3) Are there any current or forecasted trends that may make the location of employers in the region more or less desirable

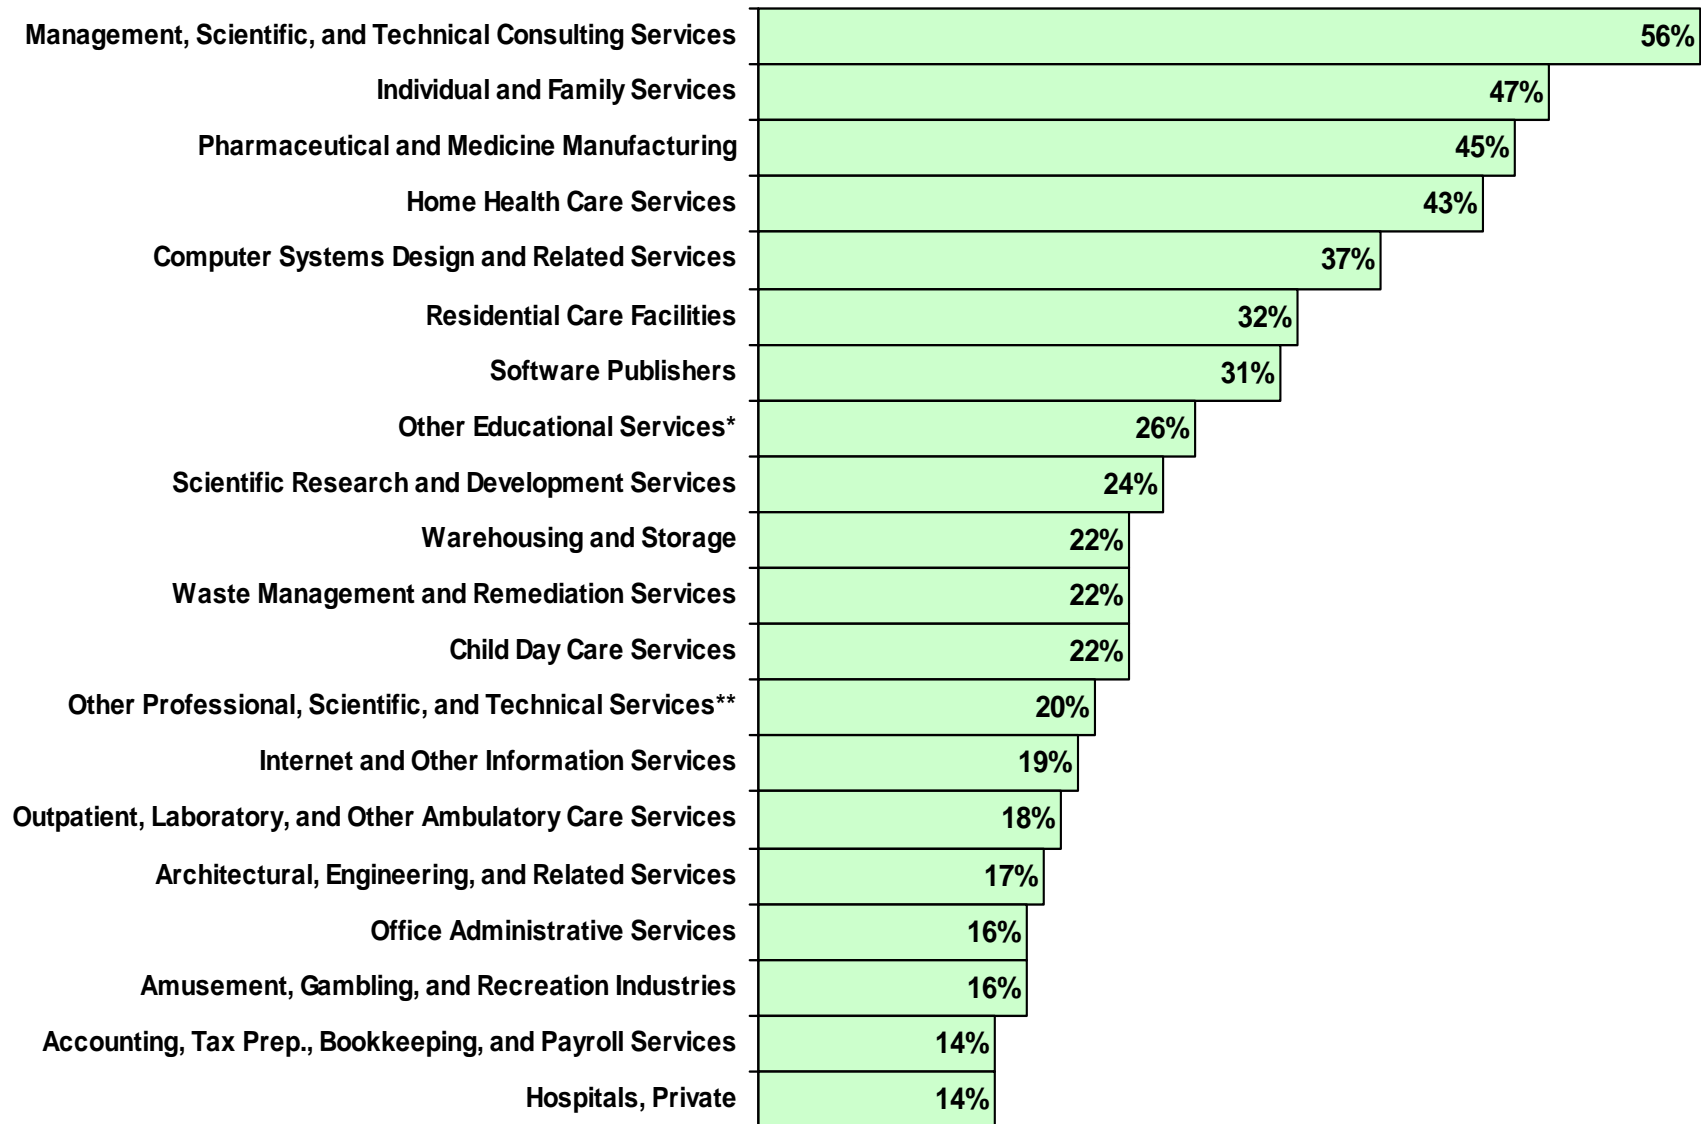

The analysis of location quotients, and other local data, is only the first step. The formulation and implementation of appropriate policy responses is the real challenge for local planners in the employment and training system.

Total Job Openings through 2016

By 2016 the Massachusetts economy is expected to expand by approximately 6.3 percent or 216,650 new jobs. An additional 768,330 jobs should arise from the need to replace workers who retire, change careers, or advance up the career ladder. In total, nearly 1 million jobs should result.

Labor Force Participation Rate:

The proportion of the total civilian non-institutional population 16 years or older, or of a demographic subgroup of that population, classified as "in the labor force".

US Business Cycle Contractions:

- November 1973 to March 1975 (16 months)
- January 1980 to July 1980 (6 months)
- July 1981 to November 1982 (16 Months)
- July 1990 to March 1991 (8 months)
- March 2001 to November 2001(8 months)
- December 2007 to Current

Source: National Bureau of Economic Research Business Cycle Dating Committee

Note: The NBER does not define a recession in terms of two consecutive quarters of decline in real GDP. Rather, a recession is a significant decline in economic activity spread across the economy, lasting more than a few months, normally visible in real GDP, real income, employment, industrial production, and wholesale-retail sales.

Note: The April 1, 2000 estimates base reflects changes to the Census 2000 population resulting from legal boundary updates, other geographic program changes, and Count Question Resolution actions. All geographic boundaries for the 2009 population estimates series are defined as of January 1, 2009. An "(X)" in the Census 2000 field indicates a locality that was formed or incorporated after Census 2000. Additional information on these localities can be found in the Geographic Change Notes (see "Geographic Changes" under the Geographic Topics section of the Estimates page).

*Total population change includes a residual. This residual represents the change in population that cannot be attributed to any specific demographic component. See State and County Terms and Definitions at <http://www.census.gov/popest/topics/terms/states.html>.

**Net international migration includes the international migration of both native and foreign-born populations. Specifically, it includes: (a) the net international migration of the foreign born, (b) the net migration between the United States and Puerto Rico, (c) the net migration of natives to and from the United States, and (d) the net movement of the Armed Forces population between the United States and overseas.

Note: The April 1, 2000 estimates base reflects changes to the Census 2000 population resulting from legal boundary updates, other geographic program changes, and Count Question Resolution actions. All geographic boundaries for the 2009 population estimates series are defined as of January 1, 2009.

Technical Notes for estimated daytime population and employment-residence ratios.

Workers – people 16 years and over who were employed and at work during the reference week. The estimate of workers includes part-time and full-time civilian personnel and people in the Armed Forces.

Total resident population – the total number of persons living in the place, as shown in Census 2000 100-percent data such as Summary File 1.

Total workers working in the place – this is the number of workers who reported working in the place, regardless of their place of residence. In other words, it is the total that worked there no matter where they lived. Residence locations are not considered, only workplace locations are reflected in this number.

Total workers living in the place – this is sometimes referred to as the number of resident workers. It is the number of people living in the place who are workers. It includes workers who live there regardless of where they worked, or in other words, no matter where their workplace was located. Place of work location is not considered, only residence location is reflected in this number.

Estimated daytime population – this is the estimate arrived at by adjusting the total resident population by the number of incommuters and outcommuters to the place, using data from Census 2000. It does not adjust for people entering or leaving the place for purposes other than commuting, nor does the commuting adjustment take the time of day of the work trips into account. The estimate is calculated by adding the total resident population and the total workers working in the place, and then subtracting from that result the total workers living in the place. This method yields the same result as would be obtained by adding the incommuters and subtracting the outcommuters from the total resident population.

Daytime population change due to commuting: number – this is the numeric increase or decrease in the population of the place as a result of work-related commuting. It is the net change in the population due to work travel and is computed by subtracting the total resident population from the estimated daytime population. Positive numbers indicate more commuters entering the place than leaving it. Negative numbers occur when more workers leave the place to go to work than enter it to come to work.

Daytime population change due to commuting: percent – this is the percentage increase or decrease in the population of the place as a result of work-related commuting. It is calculated by dividing the numeric change due to commuting by the total resident population, and multiplying the result by 100. Positive figures denote the percentage increase experienced by the population, while negative numbers show the percentage decrease in the population as a result of commuting.

Workers who lived and worked in the same place: number – this value shows how many workers who lived in a particular place also worked in that same place. It is derived from place of residence location information and responses to the question on workplace location during the week prior to filling out the census questionnaire.

Workers who lived and worked in the same place: percent – this measure is sometimes used as an indicator of worker retention, but it does not reflect variation in area size or other attributes very well. It is computed by dividing the number of workers who lived and worked in the same place by the total workers living there and multiplying the result by 100.

Employment-residence (E-R) ratio – this is a measure of the total number of workers working in a place, relative to the total number of workers living in the place. It is often used as a rough indication of the jobs-workers balance in a place, although it does not take into account whether the resident workers possess the skills needed for the jobs that are available. E-R ratios greater than 1.00 occur when there are more workers working in the place than living there. These places can be considered as net importers of labor. For example, an E-R ratio of 1.19 means that there are 19 percent more workers working in the place than living in the place. Values less than 1.00 indicate places that send more workers to other areas than they receive, i.e., they are net exporters of labor.
